

 BALLISTIC SENTRY BOXES

EUROtrade
HOUSING SOLUTIONS

Trust well-placed

Wide range of ballistic levels upon demand

Hidden ventilation system that closes to protect the sentry from smoke bombs

Smooth, simple lines, fit for any architectural environment

Anti vandal protection for the A/C unit

Entirely bullet proof construction without vulnerable spots

Smart design with inclined window glazings

Accredited level FB7 (EN 1522, EN 1523) full body ballistic protection

TITAN

The bullet proof sentry box **TITAN** offers high level bullet proof armour and a repelling appearance for the armed forces, public buildings, services and organizations. The perfect symmetry offers the construction anthropomorphic features. With overlapping armoured plates covering the steel surface, a direct reference to ancient Asian suits of armour has been achieved. The negative slope of the window glazing adds crucial space to the interior of the guard house, depriving at the same time the attacker of the advantage of reflection. The design provides for the manual control of the ventilation system as well as for the anti vandal protection for the external A/C unit.

ASPIS

The bullet proof sentry box **ASPIS** is suitable for residences, industrial buildings, hospitals and wherever else discreet armouring is needed. It has been designed with the aim of being discrete, versatile and impenetrable. In full compatibility with international ballistic standards, the **ASPIS** guard house can be adapted to the architecture of the surrounding space, either as it is –being attached to smooth plastered surfaces– or coated with decorative materials (cladding, brick or stone) as per the architectural surrounding demands. The design also provides for the protection of the external A/C unit.

Bullet proof check-point

BULLET PROOF EQUIPMENT

A wide range of Standard and Optional Equipment is offered to suit the need of every user. Custom dimensions bulletproof glazings, shooting hatches, bulletproof intercom systems and communication drawers, are only few of the solutions we provide.

Various cladding possibilities to suit your environment

Great attention is given to the comfort and safety of the guard or user. Best in class materials and attentive finish in the interior, as well as ergonomic design, aim to provide a safe and comfortable environment and reduce stress for those who work for our safety. Special facilities and equipment can be provided according to the client's particular ergonomic (desks, wc, etc) or security (video surveillance, blast relief vent, etc) needs.
