Flashkit®

Just see the extra benefits you get with Flashkit welding screens

Visibility

FLASHKIT screens are semi-transparent – so you can see if someone is working behind the screen.

Clear access

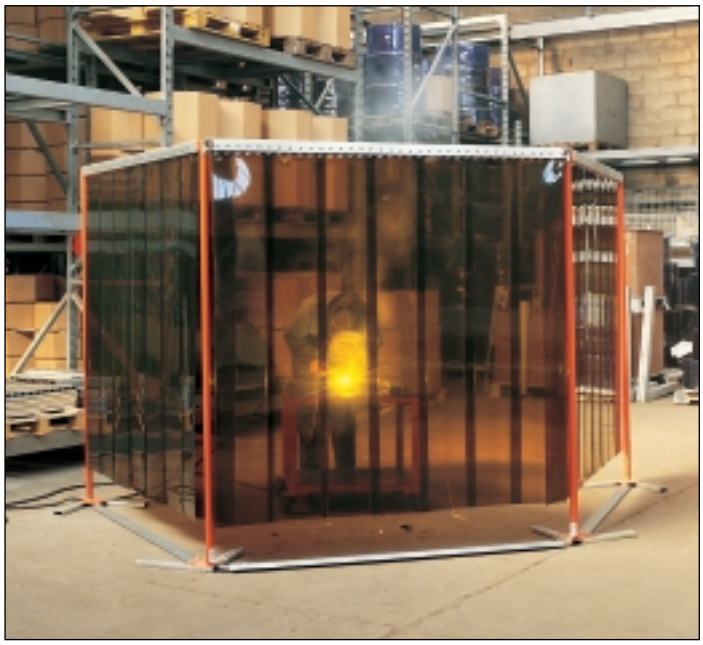
Absence of cross-bracing and the PVC strip : hanging system allow passage of people and materials through any part of the screen.

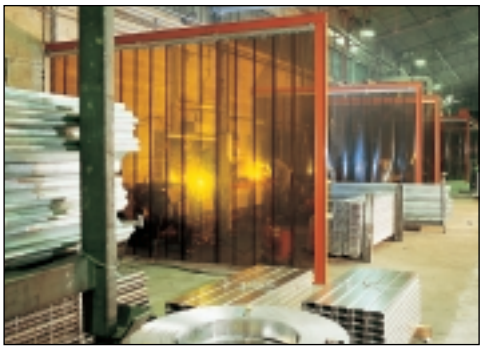
Easy mobility

Easy to move the screen wherever you need it, making it of a very versatile use.

Designed for safety

The angled feet give excellent stability, while taking up minimum floor space – which means that screens can be butted together without a dangerous gap.





And they're simple to install

Your own people can put them up immediately... no waiting for outside contractors, no outside labor costs.

Light transmission

Ultraviolet light less than 1 percent. Visible light less than 1 percent over most of range, the exception being a maximum transmission of approximately 8.7 percent in green area of spectrum. Infrared light less than 1 percent.

Multiple installations

Use any combination to provide a simple screen or a complex arrangement of partitions.
Angled feet give excellent stability and allow screens to be butted together at angles of 90° or more without a dangerous gap.

Flashkit comes complete

Flashkit welding screens are made from a curtain of specially formulated, self-extinguishing PVC strip (300 x 2), hung on a rigid steel frame. Size = 2 m wide x 2 m high.

Do it yourself assembly

To cut labor and transport costs, Flashkit screens are supplied in kit form with simple assembly instructions.

Replaceable parts

Other screens quickly become shabby when they are damaged, but with Flashkit individual parts can be replaced, so they will look good for many years.
